Tools / Platforms:	Docker, Linux, VSCode, Git, Github, Postman, Netlify, ReactDevTools
Databases:	Firebase, MongoDB, MySQL

PROJECTS / OPEN-SOURCE

Instagram Clone | [Link](#)

JavaScript, FirebaseV9, React, Hooks, TailwindCSS

- Instagram: This was the Major project I've ever built This application (Instagram clone) was built using React (Custom Hooks, Context), Firebase & Tailwind CSS, where I've built pages Like: Login, SignUp, Dashboard, UserProfile. Where I've learned how to create Schema, Conditional rendering, Routing, Prop Drilling, Custom hooks, and TailwindCSS.
- Features: Comment, Like, Login, Logout, Create account, user posts, profile.
- My Job was to handle data flow using Context, handle firebase queries, create context, add dark theme, add sidebar, add update bio features.

Full-stack Todo App (MERN) | [Link](#)

React, Javascript, NodeJS, ExpressJS, MongoDB, CSS

- Built the App made using MERN stack. The back-end handles CRUD operations on the data sent from the Front-end which is built using CSS and React. Which has features like: Complete, Add, Delete, Update Todos. where I've learned how to create basic Database Schema and create API building this Project.

YouTube Clone | [Link](#)

Javascript, ReactJS, YouTube V3 API, Material-UI

- The clone gets video data like views, channel and videos from YouTube API. The UI is built using React and Material-UI. it has pages like Feed, Video Screen (Which uses React Player Library), Search Results, and Channel.
